(54) Title: METHOD AND APPARATUS FOR FEEDING A TREATING AGENT ONTO A MOVING SURFACE

(57) Abstract: The apparatus comprises a feed apparatus (10) and an evening-out apparatus (100) placed underneath the feed apparatus. The feed apparatus (10) comprises a feed chamber (12) provided with an inlet opening (13a) and with an outlet opening (13b) and a nozzle plate (18) provided with holes (19) and communicating with the outlet opening (13b) of the feed chamber. The evening-out apparatus (100) comprises at least one inclined surface (110) which forms a downwards sloping flow path (L1) for the treating agent. The jets discharging from the outlet opening (13b) of the feed chamber (12) through the holes (19) of the nozzle plate (18) form a first treating agent flow (F1). One inclined surface (110) of the evening-out apparatus (100) receives the first treating agent flow (F1) and a second treating agent flow (F2) formed into an even laminar treating agent flow on the flow path (L1) of the evening-out apparatus (100) is passed onto a moving surface (200).
